Long Form Video

What is long from video feature?

- Long form Video is a feature which helps us to play video more than 30 seconds video and file size greater than 2.5 MB.

Why is long from as a feature?

- With google heavy ads(limits network usage more than 4.5 Mb) feature in chrome, there is a limit in size of the media.With this restriction we couldn't support long video in teaser.

How long Form Video works?

In teaser state when our video plays, we load only data/chunks for 30 seconds (2.5 Mb which is allocated for the primary video post google heavy ads). Once the user goes to mainunit we show 'Click To Continue' button which helps us to load the remaining chunks/data.

Click on the adunit disables google heavy ads feature and there is no limit in network usage.

How to Enable/Disable feature?

Configuration for enabling /disabling is passed from creative builder as teaser.json.

Param Name : isLongForm

NOTE - long from feature is only supported when the video is running in fragmented mode (.mpd file format)
